🎓 EDUCATION

Bachelor Computer Science

University of Tetova

📅 Oct 2019 - Jun 2023

★ SKILLS

- Angular
- Typescript
- NodeJS
- Javascript
- React
- NextJS
- VueJS
- Swift
- SwiftUI
- UIKit
- Firebase
- Studio 3T
- .NET
- OOP
- Combine
- CI/CD
- TestFlight
- AppStore

📄 CAREER OBJECTIVE

Experienced Software Developer specializing in innovative and full-stack solutions. My front-end and mobile experience includes UIKit and SwiftUI for iOS development, a specialized focus on Angular, and proficiency in modern JavaScript frameworks like React, Next.js, and Vue.js. This is complemented by a solid background in backend development, including experience with Node.js. I have successfully delivered tailored solutions for diverse clients in both Scandinavia and Switzerland. My strong communication skills enable effective collaboration with clients and partners to ensure project success.

👤 WORK EXPERIENCE

iOS Engineer

Shortcut Balkans

📅 Jun 2023 - Oct 2025

📍 Tetovo

- As an iOS developer, I built robust, performance-optimized applications using Swift, UIKit, and SwiftUI with a focus on reusable code. My role expanded to leading the iOS team, where I managed the full app lifecycle-from writing unit tests and deploying builds via automated pipelines to successfully submitting the final product to Scandinavian clients.

iOS Engineer

Moonlight AS

📅 Jan 2024 - Aug 2024

📍 Tetovo

- At MoonlightApp, I enhanced a Scandinavian client's application by developing new functionalities and optimizing its performance to ensure stability. I managed the end-to-end release process, utilizing automated build pipelines and leveraging TestFlight for effective beta testing. Through this work, I successfully navigated the complete Apple app submission process to deliver a high-quality product.

FullStack Engineer

iSolve

📅 Mar 2022 - May 2023

📍 Tetovo

- At i-Solve, I was responsible for delivering end-to-end full-stack solutions for key Swiss partners. My role involved architecting and engineering intuitive, high-performance user interfaces with Angular, creating a seamless and responsive user experience. On the backend, I developed and integrated robust RESTful APIs using Node.js and .NET.

❤️ PROJECTS

Rema 1000

Shortcut Balkans

CERTIFICATIONS

- Macedonian

PUBLICATIONS

- [*Cyber espionage consequences as a growing threat*](#)

- Rema 1000 is a Norwegian discount grocery retailer with around 1,000 stores across Norway and Denmark. Their 'Stavset' grocery store in Trondheim, is focused on making shopping as easy as possible for their customers, provide a safe working environment for their staff and optimising in-store logistics.
- As a key member of the iOS development team for Rema 1000, I played an integral role in building the mobile application for their innovative 'Stavset' store concept. I contributed across the entire development lifecycle, from coding and implementation to bug fixing and performance tuning, helping to deliver a feature-rich application that enhanced customer convenience and optimized in-store logistics. Our technical approach was modern and multifaceted. We built a scalable architecture using the Coordinator pattern for navigation and a hybrid UI strategy combining UIKit for core stability and SwiftUI for modern, dynamic views. My work heavily involved asynchronous programming and managing data flows with Apple's Combine framework.
- **Key Technologies Used:**
- **Networking & Data** The application utilized **gRPC** for efficient, type-safe client-server communication and **OpenAPIKit** to manage RESTful API integrations. For robust local data persistence, the project leveraged **GRDB**.
- **Core Features & Security** Key user-facing features were built using specialized libraries, including **EANBarcodeGenerator** for the in-app barcode scanner. Secure credential management was handled through the system **Keychain**.
- **User Experience** To improve perceived performance and create a polished user experience, the app featured shimmer loading effects implemented with the **SkeletonView** library.
- **Innovation** The project also included the development of advanced functionalities and explorations into **AI-driven features** designed to personalize the shopping experience.

[Norgesnett](#)

Shortcut Balkans

- This project is a comprehensive mobile app designed for a Norwegian energy company, allowing clients to conveniently monitor and manage their energy usage. The app provides users with real-time insights into their energy consumption, up-to-date energy prices, and access to past and current invoices. By offering a clear overview of their usage patterns and billing details, clients can make more informed decisions to optimize their energy costs.
- As the **iOS Development Lead**, I spearheaded the creation of this comprehensive mobile app that empowers customers to monitor and manage their energy usage. My responsibilities included guiding the development team through the entire app lifecycle, from initial architecture to final deployment. I played a direct role in implementing new features, ensuring robust stability, and resolving critical issues to deliver a high-quality product that provides users with real-time insights into consumption, pricing, and invoices.
- Our development process was built on a modern and robust technical stack. We engineered a scalable architecture using the **Coordinator** pattern for clean navigation flow and adopted a strategic, hybrid UI approach. This involved using **UIKit** for its proven reliability on complex, data-heavy screens while leveraging **SwiftUI** for building modern, declarative UI components more rapidly.

- **Key technologies used include:**
- **Combine:** For managing asynchronous events and reactive data streams throughout the app.
- **Alamofire:** For **robust and simplified HTTP networking and API communication**.
- **SwiftGen:** To ensure type-safety for project resources like colors, assets, and strings, reducing runtime errors.
- **XCTest:** For building a comprehensive suite of unit and UI tests to maintain code quality and application stability.
- **Firebase:** Utilized for powerful analytics and crash reporting, allowing us to monitor app performance and user engagement in real-time.
- **App Store Connect:** Managed the entire release pipeline, from TestFlight distribution for beta testing to final submission and release on the App Store.

[InfoMentor](#)

Shortcut Balkans

- The InfoMentor app is an educational tool designed to enhance communication between schools, students, and parents. Developed for a Swedish client, it provides easy access to various school-related information, such as assignments, attendance, and assessments. Schools using InfoMentor can customize the app features, enabling parents and students to receive notifications for updates, view assessment results, and monitor student progress. The app helps streamline school-parent communication by centralizing relevant updates in one place, accessible on mobile devices.
- As the **iOS Development Lead** for InfoMentor, I guided the mobile development team through the entire application lifecycle, from initial coding and architecture to final App Store deployment. My leadership focused on overseeing the implementation of new features, performing crucial app maintenance, and driving performance optimization. I played a key role in ensuring high app stability, resolving critical bugs, and delivering functionalities precisely aligned with client requirements.
- **The application was built using a robust stack of native iOS technologies:**
- **User Interface & Core Structure:** The UI was constructed using **UIKit** and **Storyboards** for a stable and scalable user experience. We implemented complex, interactive views for in-app messaging and scheduling using the specialized libraries **MessageKit** and **JTAppleCalendar**.
- **Data & Networking:** We managed local data persistence with **Core Data**. All network requests and communication with the backend were handled efficiently by **AFNetworking**, with **Gloss** used for swift JSON parsing.
- **Backend Services & Multimedia:** The app was integrated with **Firebase** for key services such as analytics and push notifications. Multimedia functionalities were powered by **AVFoundation** to support audio and video features.

[Cutters](#)

Shortcut Balkans

- The Cutters app is designed to simplify the process of getting a haircut by providing a quick, efficient, and fixed-price service without the need for appointments. Developed for a Norwegian client, the app allows users to find nearby Cutters salons, join a digital queue, and pay directly through the app. This drop-in-only concept is available across multiple salons in the Nordic countries, making it convenient for users to get haircuts on the go. The service emphasizes quality and efficiency, offering haircuts at a standardized price point.
- As the **iOS Development Lead** for Cutters, I directed the mobile team through the entire app development lifecycle, from initial architecture and coding to final App Store deployment. My responsibilities included overseeing new feature implementation, optimizing performance, and managing ongoing maintenance. I played a central role in ensuring app stability, resolving critical bugs, and delivering a high-quality product that met both user needs and client requirements.
- **The application was built with a focus on modern, reactive architecture and integrated with several key services:**
- **Core & UI:** The user interface was built natively with **UIKit** and **Storyboards**, providing a stable and responsive user experience.
- **Reactive Programming:** We leveraged modern reactive paradigms to handle complex asynchronous operations and state management, utilizing both **RXSwift** and Apple's native **Combine** framework.
- **Third-Party Integrations:**
- **Payments:** Secure in-app payment processing was implemented using the **Stripe** SDK.
- **Location Services:** Location-based features, such as finding nearby salons, were powered by the **Google Maps** SDK.
- **Marketing & Analytics:** We integrated **Klaviyo** for marketing automation and used **Firebase** for analytics and crash reporting.
- **Utilities:** Efficient image downloading and caching were handled by **Kingfisher**.

Apotea

Shortcut Balkans

- Apotea is the online pharmacy that always has fast deliveries, good prices, and a large range. Developed for a Swedish client, the app allows users to find both non-prescription and prescription products, including those for family and pets. Users can easily pick up animal prescriptions by logging in with their e-ID. At Apotea, you will find pharmacy products that are sent with fast delivery, making it convenient when you are sick. The platform also offers thousands of products in health, beauty, and skin care. When you pick up a prescription, licensed pharmacists will handle your case just as they would at a physical pharmacy, and assistance is available via email, telephone, or chat. Apotea is Sweden's largest online-only pharmacy.
- As the **iOS Development Lead** for Apotea, I directed the team through the entire app development lifecycle, from architectural design to App Store deployment. I was responsible for overseeing the implementation of new features, app maintenance, and performance optimization. My role was pivotal in ensuring app stability, resolving critical bugs, and delivering functionalities based on client requirements.
- **Key Technologies & Architecture**

- **UI & Architecture:** The app's user interface was built with **SwiftUI**, using the **Coordinator** pattern to manage navigation and maintain a clean, scalable architecture.
- **Web & Media Integration:** We used **WebKit** to seamlessly integrate web-based content within the native app and leveraged **AVFoundation** for all video and audio playback features.
- **Backend & Data:** The application connected to **Firebase** for backend services, including analytics and real-time data. For efficient data serialization, we used **Swift Protobuf**.
- **Custom Frameworks:** The project also utilized specialized internal frameworks, including **WrappKit** and **ShortcutFoundation**, to support core application functionalities.

[VK-Media](#)

Shortcut Balkans

- VKMedia is a prominent media company in Sweden, primarily known for its digital presence across various platforms. They have developed multiple apps for a Swedish client to deliver tailored content, using the innovative PocketPress platform to enhance user engagement. This allows VKMedia to integrate their rich web content into native mobile apps, offering features like notifications, native audio playback, and content sharing. Their suite of apps serves several brands, such as Folkbladet, Hockeyfokus, and Västerbottens-Kuriren, focusing on delivering local news and entertainment content seamlessly to users on both Android and iOS devices. By leveraging this technology, VKMedia aims to provide a smooth and intuitive user experience while keeping maintenance efficient, ensuring they can focus on high-quality journalism and content delivery.
- As the **iOS Development Lead** for VK-Media, I directed the team through the entire application lifecycle, from initial architecture to App Store deployment. I was responsible for overseeing new feature implementation, performance optimization, and app maintenance, playing a key role in ensuring stability and delivering functionalities that met client requirements.
- **The application was built using a modern, hybrid architecture:**
- **Core Architecture & UI:** The app was built natively with **SwiftUI**, utilizing the **Coordinator** pattern to manage complex navigation flows and maintain a clean, decoupled codebase.
- **Hybrid Web Integration:** A significant component of the app involved integrating web-based content using **WebKit**. We developed a custom **JavaScript Bridge (JSBridge)** to enable seamless, two-way communication between the native SwiftUI code and the webviews.
- **Networking & Analytics:** We used **gRPC** for high-performance, type-safe communication with our backend. User behavior and app performance were tracked using both **Firebase** and a specialized **TSMobileAnalytics** SDK.
- **Development Tools:** To improve code quality and maintainability, we used **SwiftGen** for generating type-safe code for project assets and resources.

[Wilfa](#)

Shortcut Balkans

- Wilfa is a Norwegian-owned company that was established in 1948 and is today one of the Nordic region's leading suppliers of small electrical appliances for thousands of homes. Wilfa is a leading brand with a focus on design, quality, safety and innovation. We focus on the environment in all our work, and as of spring 2020, Wilfa is environmentally certified and has become an Eco-Lighthouse company - we are proud of that!
- As the **iOS Development Lead** for Wilfa, I directed the team through the entire mobile application lifecycle, from initial architecture to App Store deployment. My role involved overseeing new feature implementation, ensuring app stability and performance, and managing ongoing maintenance. I was pivotal in resolving critical bugs and delivering a high-quality product that met all client requirements.
- **The application was built on a modern, native-first technology stack:**
- **Core Architecture & UI:** The app was developed entirely in **SwiftUI**, using the **Coordinator** pattern to manage navigation and maintain a clean, scalable architecture.
- **Networking:** We implemented a robust networking layer that utilized both **gRPC** for high-performance communication and **OpenAPIKit** for integrating with well-defined RESTful APIs.
- **Features & Security:** The app featured rich media content, including embedded product guides powered by **YoutubePlayerKit**. Secure storage of user credentials and sensitive data was handled using the system **Keychain**.
- **Development Workflow & Services:** To improve code quality and safety, we used **SwiftGen** for type-safe resource generation. **Firebase** was integrated for essential services like analytics and crash reporting.

[TriArtPlay](#)

Shortcut Balkans

- TriArt Play is a Swedish streaming platform focused on offering high-quality films for cinema enthusiasts. Launched by TriArt Film AB, it aims to bring a curated selection of international and Swedish films to audiences, emphasizing independent, art-house, and critically acclaimed titles. Unlike traditional streaming services, TriArt Play uses a hybrid model that combines subscription-based access with transactional rentals. The platform is available on web browsers, Android, and iOS devices, allowing users to stream directly or cast to their TVs using Chromecast.
- As the **iOS Development Lead** for TriArt, I directed the team through the entire app development lifecycle, from architectural design to App Store deployment. My responsibilities included overseeing new feature implementation, managing app maintenance, and driving performance optimization. I played a pivotal role in ensuring app stability, resolving critical bugs, and delivering functionalities that met all client requirements.
- **The application was built with a focus on performance and a robust user experience:**
- **UI & Asynchronous Operations:** The app's interface was built natively with **UIKit**. We managed complex asynchronous operations and enhanced code readability by implementing the **Promises** pattern for handling network calls and other background tasks.

- **Networking & Backend:** For networking, the app utilized **gRPC** for high-performance, efficient communication with backend services. We also integrated **Firebase** for essential services like analytics and crash reporting.
- **Media Playback:** A central feature of the app was its rich media experience, with all video and audio playback functionality powered by **AVPlayer**.

[WaterFront Cabins](#)

Shortcut Balkans

- Waterfront Cabins offers smart living in Gothenburg and is an ideal place for companies, consultants, students and private travelers looking for both short and long stays. Situated on the waterfront, you can enjoy the relaxing atmosphere and beautiful views that Gothenburg harbor offers. The area has a large parking lot available through the City of Gothenburg's parking for a fee, which makes it easy to get to us.
- As the **iOS Development Lead** for WaterFront, I directed the team in building an Internet of Things (IoT) application for smart access control. I managed the entire development lifecycle, from architecture to App Store deployment. My responsibilities included overseeing new feature implementation, optimizing performance, and ensuring app stability, delivering a high-quality product that met all client requirements.
- **The application was built using a modern, performance-oriented tech stack:**
- **UI & Asynchronous Operations:** The user interface was built entirely with **SwiftUI**. We handled complex asynchronous operations, like communicating with hardware, by leveraging the **Promises** pattern for cleaner and more maintainable code.
- **Hardware Integration & Data:** A core function of the app was hardware communication, which was implemented using the **SaltoSDK** to interact with smart access systems. For high-performance local data persistence, we utilized **LevelDB**, and data serialization was managed efficiently with **Swift Protobuf**.
- **Backend & Analytics:** The app was connected to **Firebase** for backend services, and we implemented detailed user behavior tracking through **Google App Measurement**.

[Stockholm Design Week Mobile](#)

Shortcut Balkans

- Stockholm Design Week is a week filled with inspiring events taking place in the heart of Stockholm. We welcome design enthusiasts from all over the world to celebrate great design, innovations and beautiful things and at the same time discover Stockholm as a great design destination.
- As the **iOS Development Lead** for Stockholm Design Week, I directed the team through the entire app development lifecycle, from architectural design to App Store deployment. My responsibilities included overseeing new feature implementation, managing app maintenance, and driving performance optimization. I played a pivotal role in ensuring app stability, resolving critical bugs, and delivering functionalities that met all client requirements.

- **The application was built on a modern, native-first technology stack:**
- **UI & Architecture:** The app's user interface was built entirely with **SwiftUI**, and we used the **Coordinator** pattern to manage navigation and maintain a clean, scalable architecture.
- **Data & Networking:** Data serialization was handled efficiently using **Swift Protobuf** for high-performance data interchange. For remote image handling, we utilized **Kingfisher** for asynchronous downloading and caching.
- **Backend & Services:** We integrated **Firebase** for essential backend services, including analytics, crash reporting, and real-time data features. The project also leveraged a custom **ShortcutFoundation** framework to support core functionalities.

Swedish Design Week CMS

Shortcut Balkans

- Stockholm Design Week is a week filled with inspiring events taking place in the heart of Stockholm. We welcome design enthusiasts from all over the world to celebrate great design, innovations and beautiful things and at the same time discover Stockholm as a great design destination.
- As the **Web Development Lead** for Swedish Design Week, I directed the team through the entire website development lifecycle, from initial concept to production deployment. My role involved overseeing new feature implementation, performance optimization, and ongoing maintenance, playing a key role in ensuring website stability and delivering functionalities based on client requirements.
- **The website was built on a modern, high-performance tech stack:**
- **Core Framework:** The foundation of the project was **Nuxt.js**, leveraging its powerful capabilities for server-side rendering (SSR) to ensure excellent performance and search engine optimization (SEO).
- **UI & Styling:** We adopted a flexible approach to the front end. We used **Tailwind CSS** for creating custom, responsive layouts with a utility-first methodology. For more complex, pre-built components, we utilized established Vue component libraries such as **Vuetify** and **Element UI** to accelerate development.
- **Backend & Services:** The entire backend was powered by **Firebase**, which we used for authentication, real-time database management, and hosting, creating a robust and scalable serverless architecture.

[Tide](#)

Shortcut Balkans

- This project is a mobile application developed for Tide AS, Norway's second-largest bus company. The app is designed to motivate bus drivers to lead a healthier lifestyle by encouraging them to walk more. It tracks their steps and activity, providing health-related tips and information along the way. By promoting physical well-being and health awareness, the app helps create a positive and supportive environment for Tide AS's drivers, who are essential to the company's daily operations of transporting over 500,000 passengers.

- As the **iOS Development Lead** for Tide, I directed the team through the entire app development lifecycle, from initial architecture to App Store deployment. I was responsible for overseeing the implementation of new features, app maintenance, and performance optimization. My role was pivotal in ensuring app stability, resolving critical bugs, and delivering functionalities based on client requirements.
- **Key Technologies & Features**
- **Core & UI:** The application's user interface was built natively with **UIKit** and **Storyboards**, providing a robust and performant user experience.
- **Health & Data Visualization:** A core feature was the integration with Apple's Health app using **HealthKit** to read and display health metrics. This data was visualized in an intuitive way using the **Charts** library.
- **Backend & Utilities:** We used **Firebase** for essential backend services like analytics and crash reporting. For efficient asynchronous image downloading and caching, we implemented **Kingfisher**.

InfoMentor Hub

Shortcut Balkans

- This App is for pupils and their parents/guardians using InfoMentor to get information from their school. You can choose which parts of the system you would like to receive push notifications for, like the calendar, attendance, assignments, or a daily summary of assessment that has been published in the system. The options depend on what functions your school is using. From the notifications you can easily click to view related information.
- As the iOS Development Lead for InfoMentor, I directed the team through the entire app development lifecycle, from initial architecture to App Store deployment. My role was pivotal in overseeing the implementation of new features, app maintenance, and performance optimization to ensure a stable, high-quality application for pupils and their parents. The app provides a crucial link between school and home, delivering customizable push notifications for important events like calendar updates, attendance records, assignments, and assessments. The architecture includes a Notification Service Extension to manage incoming payloads and a rich Content Extension to provide custom views for specific notifications, such as homework details.
- **Key Technologies & Architecture**
- **Networking & Authentication:** Secure communication with the InfoMentor API was managed using **AFOAuth2Manager** for OAuth2 authentication, with JSON data parsed efficiently into Swift models using **Gloss**.
- **Local Data Persistence:** We used **MagicalRecord** as a wrapper to simplify Core Data implementation for robust local storage.
- **UI & Hybrid Components:** The app featured custom alerts via **FCAAlertView** and integrated web-based content, using **WKBridge** to create a seamless communication layer between native Swift code and WKWebViews.
- **Code Quality:** We enforced a high standard of code quality and consistency across the project using **SwiftLint**.

WildFire

Shortcut Balkans

- Developed WildFire, a critical public safety application designed to let users instantly report fires to the nearest fire department. The app's core functionality allows a user to capture a photo of a fire, pinpoint its location on a map, and submit the report. It also includes a community-driven feature for users to vote on a fire's perceived risk level, helping authorities prioritize responses.
- **Key Technologies & Features**
- **UI & Core Structure:** The entire user interface, from navigation to report submission forms, was built natively using **UIKit**.
- **Camera & Media Capture:** We used **AVFoundation** to provide direct access to the device's camera, allowing users to quickly capture and attach photo evidence to their fire reports.
- **Mapping & Geolocation:** **MapKit** was integrated to display maps, allow users to select a precise fire location with a pin, and visualize the locations of reported fires.
- **Backend & Real-time Services:** **Firebase** served as the complete backend. We used Firestore to store fire report data (images, coordinates, risk votes) in real-time and Cloud Functions to process and forward these reports to the appropriate authorities.

Review Manager

Shortcut Balkans

- Developed Review Manager, a streamlined iOS application designed to manage and track bug reports for a specific software project. The app provides users with a real-time view of all reported bugs and includes a seamless sharing feature to collaborate with team members. A key focus of the project was security, ensuring that all sensitive bug report data is protected.
- **Key Technologies & Features**
- **UI & Core Structure:** The entire user interface, from the bug list to the detail views, was built natively using **UIKit** to ensure a responsive and platform-consistent experience.
- **Backend & Real-time Data:** **Firebase** was used as the backend to store, manage, and sync all bug reports in real-time across all devices, ensuring users always have the most up-to-date information.
- **Security:** Implemented robust security measures by using the system **Keychain** for securely storing user credentials. Access to the app was further protected with **Biometrics** (Face ID/Touch ID) via the LocalAuthentication framework for a secure and convenient login experience.

[Moonlight](#)

Moonlight AS

- Moonlight is the ultimate destination for immersive storytelling and interactive experiences. Moonlight is a platform designed to bring stories to life through innovative features, community engagement and cutting edge technology. Whether you're a reader seeking compelling stories or a creator looking to share your unique narratives, Moonlight offers a space where imagination meets interaction. With a rich array of tools and features, we empower storytellers to create engaging stories and connect with audiences eager to dive into their worlds. Moonlight is more than just an app; it is a vibrant community where stories are born and shared, inspiring creativity and connection.

- As a **iOS Developer**, I contributed to the implementation of new features, app maintenance, and performance optimization for MoonlightApp. I supported app stability by helping to resolve bugs and implementing functionalities based on team requirements. Throughout my role, I actively participated in the iOS development lifecycle, from coding and debugging to preparing builds for App Store deployment.
- **Technical Contributions & Technologies Used**
- **Core & Architecture:** Contributed to an application built on **UIKit** and the **Foundation** framework. I worked within the **Coordinator** pattern to help manage navigation and ensure a decoupled architecture.
- **Features & Integrations:**
- Assisted in implementing data visualization features using **DGCharts**.
- Contributed to scheduling and calendar views with **FSCalendar**.
- Supported the development of **AI-powered** features within the app.
- **Networking:** Worked with the networking layer, which utilized **gRPC** for high-performance client-server communication.
- **Development Workflow & UX:** Helped improve code safety by using **R.swift** for type-safe resource management. I also implemented polished loading states to enhance the user experience using **SkeletonView**.

Conome POS

iSolve

- The program is designed to process and log payments, with added functionality for managing waitstaff. It features a dedicated interface for waiters to efficiently manage their tables and customers. The program relies on the Conome system
- Developed and maintained responsive, high-quality user interfaces using **Angular**, **Angular Material**, and **Bootstrap**. I collaborated closely with the backend team to ensure seamless API integration and consistent implementation of UI elements. My role encompassed the full development lifecycle, including managing version control with **Git**, tracking and resolving software bugs, and deploying updates to production environments. Additionally, I contributed to the stability of the backend by maintaining and resolving bugs in the **.NET / C#** codebase.
- **Key Technologies**
- **Frontend:** Angular, Angular Material, Bootstrap
- **Backend:** .NET, C#
- **Tools & Processes:** Git, Bug Tracking, Production Deployment

Restaurant Menu

iSolve

- A restaurant menu app that relied on the Conome system, allowing customers to create a menu, add or remove products and categories, rearrange their position and finally publish the menu live.
- Developed and maintained dynamic, responsive user interfaces using **Angular**, **TypeScript**, and the **Angular Material** component library. My role encompassed the full development lifecycle, from managing version control with **Git** and deploying updates to production, to tracking and resolving software bugs. I collaborated closely with the backend team to ensure seamless API integration and also contributed to the backend by working with the **.NET** platform.
- **Key Technologies & Skills**
- **Frontend:** Angular, TypeScript, Angular Material

- **Backend:** .NET
- **Tools & Processes:** Git, API Integration, Bug Tracking, Production Deployment

Ramadan App

iSolve

- The program is specially designed for the holy month of Ramadan, allowing users to see how many hours are left until iftar or suhoor based on their city. It also includes a compass feature that shows the exact direction of the Kaaba.
- Managed the end-to-end development of a web application, taking the project from initial concept and design to final deployment and ongoing maintenance. I designed and developed the entire user interface and business logic using **Angular**, leveraging **Angular Material** and **Bootstrap** for a responsive and modern user experience. On the backend, I built and maintained the infrastructure using **Node.js** and **Firebase**, ensuring smooth operation and optimal performance.
- **Key Technologies & Skills**
- **Frontend:** Angular, Angular Material, Bootstrap
- **Backend:** Node.js, Firebase
- **Processes:** End-to-End Development, UI/UX Design, Deployment, Infrastructure Maintenance

Scooter Rent App

Freelance

- Developed a comprehensive web application for a small business to streamline its scooter rental operations. The platform allows staff to manage the entire rental lifecycle, from registering new customers and creating digital contracts to assigning specific scooters and tracking rental periods. A key feature is the automated cost calculation engine, which generates accurate pricing based on the scooter model and rental duration.
- **Key Features & Technologies**
- **Frontend:** The dynamic and responsive user interface was built with **Angular**, providing a seamless experience for managing data. The custom design and layout were created using **Tailwind CSS** for a modern, utility-first approach to styling.
- **Backend: Firebase** served as the serverless backend, using Firestore to store and manage all data in real-time, including customer profiles, scooter inventory, and rental contracts.
- **Core Functionality:**
- Customer Registration and Management
- Digital Contract Creation
- Scooter Assignment and Tracking
- Automated Rental Cost Calculation

KBC-Dibra

Freelance

- Developed a dynamic website for the KBC Dibra Mountaineering Club to showcase its achievements, highlight conquered hiking trails, and engage with its community. The site features a powerful Content Management System (CMS) that allows club administrators to easily add, manage, and remove hiking events and other content. A key feature is the user registration system, which enables hiking enthusiasts to sign up for notifications about upcoming events.
- **Frontend:** The interactive and responsive user interface was built with **React** and styled using **Bootstrap** to ensure a great user experience on any device.
- **Content Management (CMS):** **Sanity.io** was implemented as a headless CMS, giving club administrators a simple and powerful interface to manage all website content without writing any code.
- **User Engagement:** The user notification system was integrated with **MailChimp**, allowing the club to easily manage its subscriber list and send out announcements for new hiking events.
